TAS Technologies Group

Home of the Experts

With 25+ combined years in the business we understand the industry & we're ready to help.

Key Features

– One Click Confirmation

Built to work with the Amtelco and Telescan software platforms through WCTP integration. One Click Confirmation removes the need for your customers to reply to the text message for confirmation. We strip this information and replace it with a simple link. All the customer has to do is click this link and we send you the proper code for confirmation. It's that simple. Better yet, there's no cost for the inbound confirmation message.

– Dual Redundant Aggregators

We utilize dual redundant aggregators with automatic fail over to provide the highest level of redundancy in the industry. Utilizing two of the largest aggregators in the world you can rest assured your messages will be delivered to your customers. It's 2 aggregators for the price of 1.

– Simple, No Nonsense Pricing

No long term contracts, no automatic renewals. Just $25.00 monthly base rate and *$0.01 per message or *$0.013 per message with one click confirmation.

*A "message" is considered a SMS message segment of 160 Characters, To/From Canada Numbers add $.008 per message segment
